

PRODUCT REQUIREMENTS DOCUMENT

(PRD v1.0)

Product Name: HAVENHUB

Document Owner: Christopher Tiku (Lead PM)

Contributors: Chisom Onyekaba (PM), Happiness Falade (PM)

Target Release Date: September 2, 2026

Version: 1.0

PRODUCT OVERVIEW AND VISION

HAVENHUB is a unified digital real estate marketplace designed to make property rental safer, faster, and transparent across Nigeria. By consolidating fragmented search, listing management, and tenant landlord communication into a single web application, HAVENHUB eliminates fraudulent listings and streamlines rental workflows.

Scope Strategy for Sprint Execution

Given the tight delivery window leading up to September 2nd Phase 1 MVP focuses strictly on high impact core capabilities (Authentication, Listing Management, Advanced Search, Property Details, Saved Properties, Direct Messaging). Complex features like live payment processing, 3D virtual tours, and automated identity verification are explicitly moved to post MVP to ensure a live, polished, production ready release on time.

TARGET USER GROUPS AND PERSONAS

- 1. Property Seekers:** Renters looking for verified, affordable housing without fake listings.
- 2. Landlords:** Owners seeking serious, qualified tenants without managing scattered channels.
- 3. Real Estate Agents:** Verified professionals listing and managing rental portfolios on behalf of landlords.
- 4. Property Managers:** Portfolio managers managing multiple listings and tracking tenant communications.
- 5. Administrators:** Platform moderators ensuring listing authenticity and enforcing platform security.

Key Personas:

- Adaeze Okafor (27, Marketing Executive - Lagos): Needs verified listings, clear photos, precise filters (price, location, bedrooms), and direct landlord contact.
- Emeka Nwosu (45, Civil Engineer / Landlord - Abuja): Needs a single dashboard to post listings, respond to enquiries, and mark properties as rented.
- Tunde Adebayo (38, Real Estate Agent - Lagos): Needs a verified agent badge, portfolio management, and organized inquiry tracking.

MVP SCOPE MATRIX

Feature	MVP (Immediate Release Scope)	Post MVP Scope
Authentication	JWT Auth, Role Selection (Seeker, Landlord/Agent, Admin)	Social OAuth Login, Multi Factor Auth
Listings	CRUD Listings, Photo Uploads, Active/Rented Status	Video Uploads, 3D Virtual Tours
Search & Discovery	Location, Price, Type, Bedroom Filters	AI Personal Recommendations
Communication	In app Text Messaging thread tied to Property ID	In app Audio/Video Calls
Shortlisting	Bookmark / Saved Properties List	Saved Search Email Alerts
Rental Application	Simple "Inquire Now" modal form	Online Rental Payments / Escrow
Admin & Security	Listing Approval Queue, User/Listing Suspension	Automated OCR Identity Verification

USER STORIES AND ACCEPTANCE CRITERIA

MODULE 1: AUTHENTICATION AND USER ACCOUNTS

US 00: User Registration & Role Selection

As a new user,

- I want to register an account and select my role (Property Seeker, Landlord/Agent),
- So that I can access personalized features relevant to my goals.

Acceptance Criteria:

- ❖ Registration form requires Name, Email, Password, and Role selection.
- ❖ Passwords must be hashed safely before database insertion.
- ❖ Successful signup generates a JWT token and redirects the user to their role dashboard.

MODULE 2: PROPERTY SEARCH AND DISCOVERY (SEEKER FOCUS)**US 01: Property Search with Filters**

As a property seeker,

- I want to search and filter listings by location, price range, property type, and bedroom count,
- So that I can rapidly locate relevant properties within my budget.

Acceptance Criteria:

- Filter controls for Location, Price Range (Min/Max), Property Type, and Bedrooms must exist on the search page.
- Search queries must filter backend database results dynamically.
- If zero properties match, display an explicit "No properties found" message with a clear action button.

US 02: Save Properties for Later

As a property seeker,

- I want to bookmark properties to a saved list,
- So that I can evaluate shortlisted options prior to contacting landlords.

Acceptance Criteria:

- A "Save" button must be visible on property cards and detail views.
- Toggling the button saves/removes the property ID from the user profile.
- Saved properties must render under a "Saved Properties" section in the Seeker Dashboard.

MODULE 3: LISTING MANAGEMENT & APPLICATIONS**US 03: Create & Publish Property Listings**

As a landlord/agent,

- I want to create a listing with photos, descriptions, pricing, and structural specifications,
- So that I can market available real estate accurately.

Acceptance Criteria:

- ❖ Listing form includes Title, Rent Price, Location, Property Type, Bedrooms, Bathrooms, Amenities, and Image Uploads (3 to 10 photos).
- ❖ Submitted listings default to Pending status and enter the Admin queue.
- ❖ Landlord receives confirmation when the listing is submitted.

US 04: Update or Mark Property as Rented

As a landlord,

- I want to edit listing details or flag a property as rented,
- So that I do not receive inquiries for unavailable properties.

Acceptance Criteria:

- Landlord dashboard displays all active, pending, and rented properties created by the user.
- Clicking "Mark as Rented" sets listing status to Rented.
- Rented properties are automatically excluded from public search queries.

MODULE 4: INTEGRATED MESSAGING & INQUIRIES

US 05: Direct In App Messaging

As a property seeker,

- I want to send inquiries directly to the listing owner through an internal chat thread,
- So that communication remains tied directly to the property context.

Acceptance Criteria:

- ➔ Clicking "Enquire / Contact Landlord" opens a message modal.
- ➔ Submitting a message creates a message record referencing PropertyID, SenderID, and ReceiverID.
- ➔ Both parties can view and reply to full conversation history inside their platform inbox.

MODULE 5: MODERATION & ADMINISTRATION (ADMIN FOCUS)

US 06: Review & Verify Property Listings

As an administrator,

- I want to review and approve pending listings before they appear in public search,
- So that fake and scam listings are eliminated.

Acceptance Criteria:

- ❖ Admin dashboard provides a moderation queue listing all Pending submissions.
- ❖ Admin can click "Approve" (changes status to Active) or "Reject" (requires entry of rejection reason).
- ❖ Landlord receives notification of approval/rejection.

US 07: Suspend Users or Resolve Reports

As an administrator,

- I want to handle user reports and suspend policy violating accounts,
- So that platform integrity and safety are maintained.

Acceptance Criteria:

- Reports submitted by users land in an admin moderation queue.

- Admin can temporarily suspend or permanently ban accounts.
- All moderation actions are logged for security tracking.

NON FUNCTIONAL REQUIREMENTS (NFRs)

- **Performance:** Search query responses must complete rapidly. Image assets must be optimized using external hosting services like Cloudinary.
- **Security:** Passwords encrypted using standard hashing methods. Authentication enforced using JWT tokens stored securely.
- **Responsiveness:** UI must be fully responsive across mobile, tablet, and desktop viewports.
- **Reliability & Hosting:** Frontend and backend deployment configured on cloud environments (Vercel, Render, or Railway) with managed database instances.

TECHNICAL STACK AND DELIVERABLES ALIGNMENT

- **Design:** High fidelity UI layouts and interactive wireframes.
- **Frontend:** Web application with responsive styling.
- **Backend:** RESTful API connected to database architecture.
- **Documentation:** API Workspace endpoints, GitHub Repository, and Live Deployment URL.

DELIVERY TIMELINE PLAN

Phase 1: Setup & Foundations

- Finalize PRD v1.0 and lock core MVP scope.
- Setup repository structure, database schema, and authentication routes.

Phase 2: Core Feature Implementation

- Listing CRUD operations, photo integration, search engine filters, and direct messaging API endpoints.

Phase 3: Admin Tools & Integration Testing

- Admin moderation queue, reporting tools, bug fixes, and system testing.

Phase 4: Deployment, Demo, & Final Handover

- Production deployment, live environment verification, and final documentation sign off.
